

One day Powered Access solution for PTSG – Access & Safety Ltd

Benefits of using truck and track mounts as a one-day powered access solution:

Background

PTSG Access and Safety are a leading supplier of niche specialist safety services. They provide maintenance, inspection and testing solutions for safety at height, as well as the design and installation of permanently installed façade access equipment and fall arrest equipment. They have recently turned to national truck and track mount specialists – Wilson Access Hire for their one-day powered access projects.

Wilson Access offer the most cost-effective powered access machines for a one day or short-term hire, and has a modern, reliable truck and track mount fleet with class-leading working heights and outreach from leading manufacturers.

Solution

Current market perception suggests that truck and track mounts can be more expensive and are deemed a much more Specialist Powered Access option. Most users, including PTSG Access and Safety tend to rely on traditional MEVPs (scissor lifts, articulated booms) as their preferred access option for single site projects. However, when PTSG were searching for the best option for multiple sites per day projects, Wilson Access were quick to provide them with a versatile and cost-effective solution to help service their one-day powered access needs using truck and track mounts. They could immediately see the benefits of using truck and track mounts giving them greater flexibility to be on and off site quickly, especially for time-sensitive projects.

-  **On and off site quickly - Standard 8hrs on site with overtime if required**
-  **Timed deliveries - No waiting around for machines to be on site and conveniently off site at the end of the shift**
-  **No multi – drop delivery vehicles saving you time**
-  **Dedicated operator working directly for you - Offers flexibility**
-  **No need for IPAF training with operated machine hires**
-  **Maximum working height and outreach - Largest purpose made Access products available in the UK**
-  **Extra capacity for Safe Working Load - From 230kg - 600kg**

Client testimonial

“When we were in need of a practical cost-effective solution for our multiple sites per day testing solutions, the versatile Powered Access machines from Wilson Access Hire are obvious solution. They have supplied machines we have utilised across the broad range of our industry sectors and applications. They have been easy to deal with and offer a flexible approach with experienced operators readily available to assist on projects. This was a perfect fit for us. The solution has been cost-effective and has met the needs of our powered access projects time and time again.”

Nick Hayes, Managing Director of PTSG Access Testing

CTE ZED 21JH

The CTE ZED 21J truck mount has a working height of 20.80m and a horizontal outreach of 10.00m. Available as a self-drive option or can be supplied with an experienced operator.
